

Another First for AHP!

Virox Technologies Inc. and Anivac Corporation introduces a new innovative line of Animal Grooming products with the Accelerated Hydrogen Peroxide Technology.

The Virox team is excited to have launched a new line of products through Anivac Corporation for the Animal Grooming market. Our Accelerated Hydrogen Peroxide® technology is being used as an anti-fungal wash in the patented Anivac Vacuum Bathing Systems for animals that can be used for general cleaning and pre and post surgery cleansing. The system has been validated by the University of Guelph and is widely used in the equine industry including by Jay Hayes, two-time Olympian on Team Canada.

The products will be sold under the brand Pure Oxygen and are available in a Cleaner-Deodorizer & Fungal Wash and a Rinse Free Shampoo & Deodorizer. These products further demonstrate the safety of the AHP technology as an innovative industry leader.
